CR-05 Acceptance Criteria Catalogue and Verification Methods

Document ID: CR-05 | Category A: Client requirements

1. Document metadata

Field	Value
Document ID	CR-05
Filename	CR-05_Acceptance_Criteria_Catalogue.pdf
Category	A - Client requirements
Version	1.0
Creation date	2026-10-14
Data status	Factual guidance with synthetic examples drawn from the fictional jobs
Main topics	Acceptance criteria; Verification; Definition of done
Relevant skills and technologies	Testing
Relevant entity IDs	JOB-001, JOB-002, JOB-003, JOB-004, JOB-005, CR-03, EVA-007

Purpose and scope: catalogue the types of acceptance criteria, how they are verified and how they link to the fictional jobs.

2. Executive summary

Acceptance criteria are observable conditions linked to requirement IDs. The catalogue lists types, verification methods, evidence and a definition of done, with counts for every fictional job.

3. What an acceptance criterion is

An acceptance criterion is a condition the delivered work must meet for the client to accept it. It is observable, linked to a requirement ID and verified by a stated method. Acceptance criteria are written by the client (CR-03) and are evidence that a proposal addressed the right outcome.

4. Catalogue of criterion types

Type	Example criterion (from the fictional jobs)	Verification method	Evidence produced
Functional	A customer from Company A cannot read Company B orders	Automated test or scripted demo	Test report
Performance	Order list loads within 1 second at the stated volume	Measured run on agreed data	Before/after measurement
Security	Containers run as non-root; no critical image findings	Scan report and configuration review	Scan output
Accessibility	Keyboard-only purchase flow succeeds	Manual walkthrough plus automated audit	Audit report
Data and AI quality	Recall@5 reported on a 50-question set with method	Evaluation run on expected sources	Evaluation report
Deployment	A deployment can be reproduced from the repository only	Clean-environment run	Pipeline log
Offline and mobile	Airplane-mode test shows booked classes	Device test	Test notes with device list
Documentation	Runbook reviewed by the client	Document review	Signed review note
Test coverage	Unit tests exist for the stated logic	Test run in the pipeline	CI result

5. Definition of done

- All Must requirements have passed their acceptance criteria.
- No open critical or major defects; minor defects are logged with owners.
- Documentation and runbook delivered.
- Source code and configuration are in the client's repository.
- Client sign-off is recorded in writing.

6. Defect severity and acceptance thresholds (illustrative)

Severity	Definition	Acceptance rule
Critical	Blocks a Must requirement or loses data	Must be fixed before acceptance
Major	Requirement works with a significant workaround	Fix or agree a dated plan
Minor	Cosmetic or low impact	May be accepted with a logged list

Example: the escrow reconciliation mismatch in PRJ-002 would be classed as major; it shipped behind a feature flag with a disclosed plan, which matches the 'agree a dated plan' rule.

7. Acceptance criteria counts per job

Job	Criteria	Requirements	Criterion IDs
JOB-001	4	4	AC-001-01; AC-001-02; AC-001-03; AC-001-04
JOB-002	4	4	AC-002-01; AC-002-02; AC-002-03; AC-002-04
JOB-003	4	4	AC-003-01; AC-003-02; AC-003-03; AC-003-04
JOB-004	4	4	AC-004-01; AC-004-02; AC-004-03; AC-004-04
JOB-005	4	4	AC-005-01; AC-005-02; AC-005-03; AC-005-04
JOB-006	4	4	AC-006-01; AC-006-02; AC-006-03; AC-006-04
JOB-007	4	4	AC-007-01; AC-007-02; AC-007-03; AC-007-04
JOB-008	4	4	AC-008-01; AC-008-02; AC-008-03; AC-008-04
JOB-009	4	4	AC-009-01; AC-009-02; AC-009-03; AC-009-04
JOB-010	4	4	AC-010-01; AC-010-02; AC-010-03; AC-010-04

8. How acceptance criteria are used in evaluation

- A proposal should state how it will meet each Must requirement; unaddressed requirements are a requirement-risk flag (EVA-006).
- Testing and handover hours in an estimate show intent to meet the criteria (EVA-007).
- Criteria with illustrative targets may be negotiated before award.

9. Evidence requirements and uncertainty

If a criterion cannot be verified with the information available, the assistant states 'verification method not specified' instead of assuming it will pass.

10. Summary of key findings

- Each criterion needs a verification method and evidence.
- Defects are classed critical, major or minor with acceptance rules.
- Missing verification methods are reported, not assumed.

11. Keywords and alternative terminology

acceptance criteria; definition of done; acceptance test; sign-off; defect severity; verification method; UAT
